

Special Delivery Axial Fans Roof Mounted

Axial IE SERIES Stainless Steel Construct

(Ingress / Egress)

by Condor

flow velocity controlled

Sizes:

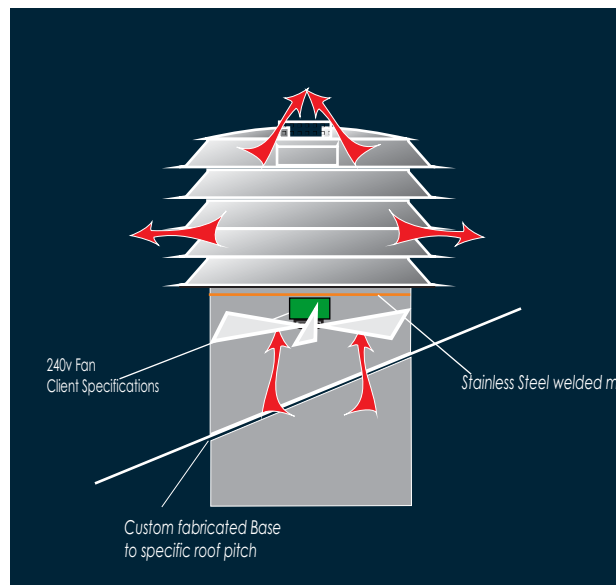

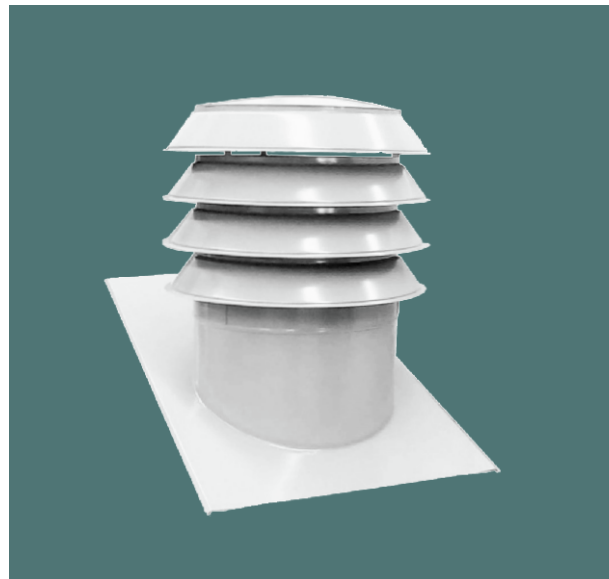

300
350
400
450

The Condor Special Delivery construct features low noise operation with high performance due to the low resistance of the stainless steel design.

This 240v unit is versatile and can be installed on any type of roof and roof pitch as the base supplied is fabricated to the specifics of the roof.

It's use as either a supply or exhaust unit is achieved by changing the flow path by reversing the axial fan cartridge.

So whether removing odour from an aged care facility or supplying filtered air into a day care centre or butterfly breeding farm, the Special Delivery IE Series design ticks all the boxes.

An optional 12v actuated ceiling register can be employed to switch the fan on when opened to ingress or egress mode
